

It's time to act!

Biochar based Carbon removals
Made in Africa with Swiss precision

INTERHOLCO (IHC) is a Swiss company managing a natural tropical forest in the Republic of Congo, keeping thousands of gorillas and 1.16 million ha of old-growth forest protected.

We generate high quality carbon dioxide removals from 100% FSC-certified hardwood residues turned into biochar. We support the scaling up of the carbon removal market with additionality and co-benefits in the Global South.

We supply high integrity carbon removal credits via our production, up and running since 2021 with about 20'000t tCO₂eq/year - fully certified by the Swiss based Carbon Standards International standard (EBC C-Sink).

INTERHOLCO (IHC) is the first Congo Basin forestry company to hold double FSC® certification (Forest Stewardship Council® C122325) for both Forest Management and Ecosystem Services. INTERHOLCO ranks first in the SPOTT ESG transparency ranking worldwide.

Responsible forest management (SDG 13, SDG 15) is carried out by more than 1'000 local workers, who enjoy a competitive package (fair wages, medical insurance, paid leave, etc. - SDG 8). Sustainable wood harvesting and processing (SDG 12) gives 18'000 local inhabitants plenty of benefits (SDG 10).

Our company runs a hospital (SDG 3), school and library with IT and English courses (SDG 4, SDG 5) for free. On top of that, clean drinking water (SDG 6), electricity and housing (SDG 1) are provided.
