

laminated scantlings  
engineered to perform

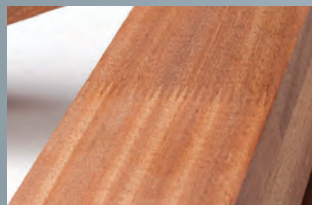

## engineered to perform

INTERHOLCO proudly offers finger-jointed laminated scantlings made from SUSTAINABLE HARDWOOD - MADE IN AFRICA. Out of our responsibility towards nature and the climate, we engineer high-quality wood products for optimal performance, turning 'less' into 'more', using more of the entire tree.

With finger-jointing, INTERHOLCO is able to turn short sections into longer lumber with added strength. From door to window frames, INTERHOLCO's laminated scantlings make all your exterior and interior projects possible, beyond your imagination.

### MULTI-LAYER

We cater to your needs: with finger-jointed wood products, multi-layer combinations are possible, based on your needs.

### FOUR SIDES CLEAR

Our laminated scantlings are 'four sides clear'. That means that all natural defects are removed during the process.

### CUT-TO-SIZE

Our standard range for finger-jointed products comes in 86, 96, 105, 125 and 145 mm. Please contact us for other widths.

### SAFE AND TESTED

Our laminated scantlings are meticulously tested. Our quality compass points you to reliable, internationally recognised certification.

## SWISS PRECISION MADE IN AFRICA

Take Swiss precision. Add our 50-year experience in Africa. Result: carefully crafted, stronger products that are environmentally friendly and high-performance, ideal for demanding applications.

LAMINATED SCANTLINGS | 4

## powering your project with African forests

INTERHOLCO brings you finger-jointed laminated scantlings in Bossé, Kosipo, Limbali, Sapelli, Sipo and other species. We certify their outstanding technical and environmental performance with trusted labels: CTB-LCA 221 and FSC® C022952.

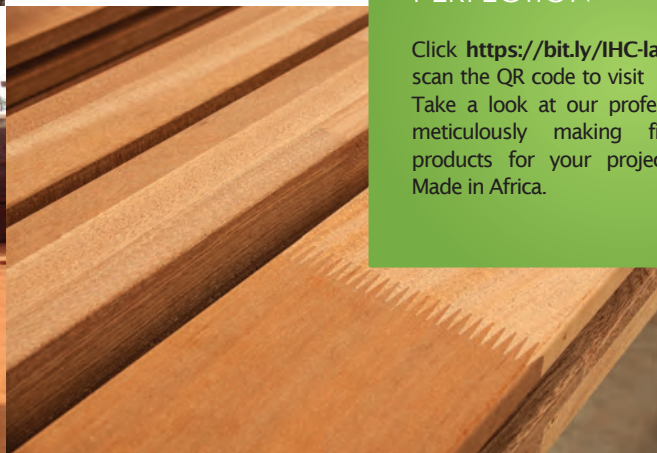

The mark of  
responsible forestry

CERTIFIED TO  
PERFECTION

## sustainable, traceable, renewable, recyclable

INTERHOLCO owns the product as well as the whole production process, from the forest to sales and certification. We cater to your needs with KKK or DKD laminated scantlings, depending on the final finish you require.

Sustainable, traceable, renewable, recyclable from certified sources

A consistent moisture content is maintained throughout the process

Dimensionally stable, homogeneous material properties, higher strength

Uniform quality and dimensions, gain time and productivity

Cut-to-size, minimising cross cutting and sawing waste

Carbon-positive, our products help save the planet

## SAVE THE CLIMATE AND OUR PLANET

Our eco-friendly laminated scantlings help you protect 1.1 million hectares of forests, with their elephants and gorillas. Keep the forest alive, help us fight climate change and preserve life on our planet!

The image shows a spacious, modern interior with a high ceiling made of dark wood beams. A large, rustic stone fireplace is the central feature, with a fire burning inside. To the left, a round dining table with four green chairs is set up. Large floor-to-ceiling windows on the right side offer a view of a lush green garden. In the foreground, there are two black metal chairs with a grid pattern and two large, round, woven wicker ottomans. The floor is made of polished wood.
